

OUR MIRACLE MEGA CITIES

Credit: Shutterstock

A SHOCKING FACT THAT ALL WILL GRAPPLE WITH, SEE EVERY DAY, BUT NOT ALWAYS REALISE...

OBJECTIVE:

To paint a miracle true picture as part of my journey to make you finally believe!

1. INTRODUCTION

Imagine a “City” so large that it is incomprehensible to understand its complexities. If you think of Tokyo or New York, think again, these cities are like minute suburbs against this city I am thinking about. Our entire World has a few Billion inhabitants, but these mega mega cities have Trillions of inhabitants!.

2. BACKGROUND

In a city like New York, there are millions of people all running around like little ants, each with a mission to survive, serve and/or make money. Early in the morning Bakers awake to bake bread just as night nurses return from their night shifts and Taxi and Uber drivers are transporting people to and from their workplaces. The city has good spots and bad spots, areas of high affluence, poor areas, areas of high crime, but the city overall is still able to operate. Municipal workers are cleaning up the city, police officers are trying to maintain law and order, doctors and nurses are trying to heal the sick and so does each person have his/her “duty”. As long as the city is able to generate an adequate income, pay its municipal workers, things should still go well, BUT this is not always possible, some cities remain “healthy”, while others become “sick” with large parts turning into slums. So each city has its good and bad spots. **NO CITY IN THE WORLD IS PERFECT ALL OVER**, and I will get back to this point later. Just like an apple that develops rot, it usually spreads, so **THE ROT NEEDS TO BE STEMMED AS SOON AS POSSIBLE** and I will also get back to this point later.

3. FACTS ABOUT OUR LARGEST CITIES

Ok, our cities have people with brains, but there are also many other “cities” with inhabitants that are thriving even though they have much smaller brains! Let us take an anthill as an example. The anthill also has millions of ants (inhabitants) each with a duty and mission to maintain and grow their city, protect it and care for their young. Each ant knows exactly what is needed and knows how to go about its job and even knowing (with that minute brain) how to “air-condition” their home, to ensure it does not overheat and kill all. These “cities” are quite impressive, but that is still NOTHING compared to the MEGA MEGA CITIES I am about to share with you soon.

A study by <http://www.bbc.com/earth/story/20160311-how-many-people-can-our-planet-really-support> discusses the fact that earth can sustain up to 11 Billion people, before experiencing huge environmental problems and we are currently around 8 Billion! Below is a list of our Top 20 cities in population size as per https://en.wikipedia.org/wiki/List_of_largest_cities and with Covid and all the

other challenges, I do not believe that the population changed much since this survey was done in 2018:

No	City	Country	UN 2018 population estimates (City, Metropolitan and Urban areas included)
1	Tokyo	Japan	37 400 068
2	Delhi	India	28 514 000
3	Shanghai	China	25 582 000
4	São Paulo	Brazil	21 650 000
5	Mexico City	Mexico	21 581 000
6	Cairo	Egypt	20 076 000
7	Mumbai	India	19 980 000
8	Beijing	China	19 618 000
9	Dhaka	Bangladesh	19 578 000
10	Osaka	Japan	19 281 000
11	New York City	United States	18 819 000
12	Karachi	Pakistan	15 400 000
13	Buenos Aires	Argentina	14 967 000
14	Chongqing	China	14 838 000
15	Istanbul	Turkey	14 751 000
16	Kolkata	India	14 681 000
17	Manila	Philippines	13 482 000
18	Lagos	Nigeria	13 463 000
19	Rio de Janeiro	Brazil	13 293 000
20	Tianjin	China	13 215 000
TOTAL			380 169 068

So quite impressive figures per city. This totals to around 380 Million for all 20 cities. If these cities were thus all joined together, it would be a huge achievement, but this figure is still totally insignificant to the Mega cities.

4. HOW BIG IS BIG?

Before doing so, let us say earth can “carry” 11 Billion people, so what size planet or how many earth like planets would be needed for say 68 Trillion people? A whopping over 6 000 such earths with full capacity citizenship all linked in one huge huge city! This would actually be incomprehensible and that poor Major...!

If we take the largest city we currently have (Tokyo) at say 40 million by 2021, then that means our Mega city would be 1.7 Million times bigger or 1 700 000 Tokyo cities joined together all in one ultra mega city!

NOW THAT IS **BIG!**

Wait, the message has not fully come through yet! Let us take New York City with an estimated 18 000 000 people, that means just one of the Mega Cities are 3 777 778 times larger, or what if you live in South Africa with Johannesburg's estimated 5.7 million people? Well, then one of the Mega cities would be almost 12 million times larger?! **TOTALLY RIDICULOUS!**

5. CAN THESE MEGA CITIES REALLY EXIST?

What if I tell you that such "cities" really do exist and worst still, their inhabitants do not have Brains, yet each one know exactly what to do and work in exact harmony? (well, most of the times).

What if I tell you that there are actually Billions of such Mega Cities? Are you confused? Some of these Mega Cities or Mega Structures are smaller, but others are even up to 1 000 times larger than the mega city I used in comparisons above.

6. WHAT HAS TRILLIONS OF WORKERS ALL WITH NO BRAINS YET WORKING IN PERFECT UNISON?

You probably think I am mad, our whole population is only 8 000 000 000, so how can there be bigger "cities" and then Billions of them? Before I reveal, a last method to put 68 Trillion in perspective:

If a Sand grain is 1 mm in size and we placed Sand grains Flat on the ground in a square, how big would that square need to be to represent 68 Trillion?

Well, it would be over 8.2 Kilometres by 8.2 Kilometres by 8.2 kilometres by 8.2 Kilometres in size with 68 Trillion 1mm sand grains in-between that massive square!

Ok, time to reveal

7. THE INTELLIGENTLY DESIGNED MEGA CITIES

These Mega Cities are our Bodies! Yes, our Bodies consist of around 30 Trillion cells and around 38 Trillion bacteria cells totalling about 68 Trillion (give or take a few trillion) and whales have up to 1 000 times more!

Each cell has a purpose, each cell does not have a brain, yet goes about its daily and nightly task with precision even when you sleep. Our primary cells are defined and guided by our 3.2 Billion DNA strands. Most of our DNA are the same, but with a few differences for features such as facial features, body length, body weight, sex, race, and indirect features such as personalities.

Each of our bodies function as a Mega City with inhabitants Millions of times more than our Largest physical cities, even thousands of times more than all our cities in the world! The little red and white blood cells, skin cells, nerve cells, fat cells, etc... go to work with precision knowing where to go and what to do, with NO BRAINS... "Redundant" cells are automatically removed and replaced and a perfect balance is maintained.

Earlier I said that "no city in the world is perfect all over" and so is our body. There is a saying that goes like this:

"Welcome to your 40s, if you do not yet have an ailment, do not worry, one will be allocated to you soon" and "Welcome to your 50s, if you do not yet have a few ailments, do not worry, some will be allocated to you soon". We all have some "weak DNA links", so if there is "Rot" somewhere, this needs to be stemmed as soon as possible, else it will spread like cancer.

Bottom line is that our brainless cells make us more complex than a few million New York cities put together who all have humans with brains! Makes you think? This is NO accident, we have been purposely made...
